

Quality Control Supervisor Injection Molding

Scope of Duties:

- Coordinates internal product quality inspection processes (incoming, first piece, last piece, in-process, etc.).
- Supervises and trains quality inspectors and reworking personnel.
- Decides about product quality issues, and elevates to quality engineering if needed.
- Oversees timely disposition and handling of non-conforming material.
- Collects and analyses inspection and quality data, prepares and submits quality reports to management.
- Participates in daily production meetings to report and discuss product quality.
- Oversees and/or conducts product audits per established audit plans.
- Assists with customer complaints (8-D completion, root cause analysis, corrective actions).
- Travels to customer or suppliers if needed.

Requirements:

- AS Degree or higher.
- 5+ years recent Quality Supervisor experience for component manufacturing company for automotive industry.
- At least 3 years of experience with plastic injection molded parts and related quality concerns.
- Strong metrology background (Part print reading, GD&T, gages, calipers, CMM, etc.).
- Knowledge of quality core tools; specifically PPAP, Control Plans, MSA, SPC preferred.
- Experience with systematic problem solving.
- Proficient with computers in particular MS Excel, MS Project.

We offer competitive pay and benefits; challenging manufacturing jobs; a supportive management team; and a fairly new manufacturing facility. We are looking for individuals that are driven by overall company objectives and fit our team philosophy and core qualifications (Communication, Decision Making, Flexibility, Initiative, Results Orientation, Teamwork).
