

Quality Engineer

 **Online Application**
pollmann-na.com/online-application

We are looking for an experienced Quality Engineer for our Romeoville manufacturing facility. We will consider candidates with strong automotive background and quality engineering experience in all phases of product life cycle; solid technical experience ideally in injection molding and precision stamping are preferred and proficiency in metrology is expected.

Main Job Functions

- Prepares PPAP package for automotive customers; works with customers and suppliers to prepare and update related documentation including flow charts, control plan, FMEA, MSA, dimensioning report, SPC.
- While preparing Control Plans develops methods for inspection, testing, and evaluation;.
- Handles quality claims (customer, internal, supplier); manages root cause analysis and corrective actions; updates related documents including FMEA.
- Assists with the implementation of new or changed customer requirements; monitors compliance of existing and new customer requirements.

Job specific Competencies required

- A bachelor Degree is required.
- Certified Quality Professionals preferred.
- Automotive experience is very important to understand relevant business, supply chain and approval processes.
- Proficient with automotive quality core tools (APQP, PPAP, MSA, SPC, FMEA). Must be able to create elements of the PPAP package (control plans, flow chart, dimensional reports, FMEA, etc; document review experience is not enough.
- Experience with automotive customer interactions.
- Proficient with GD&T; must be able to make decisions based on dimensional reports and part print.
- Strong data analysis, interpretation and presentation skills; must be able to verify data and challenge.
- Experience with plastic injection molded and stamped parts experience preferred
- Experience with Minitab preferred
